TECH GEEKS

Cutboard

From Chaos to control in video production

Pika tech

The Problems

- **Performance issues**

Video files crash or lag during handling , disrupting creative flow and productivity

- **Unstructured Feedback**

Clients demand constant changes without structure , creating confusion and network

- **Scattered Processes**

Feedback cycles are slow and scattered across multiple platforms and emails

- **Complex Tools**

Professional software is expensive and complex , with poor mobile support for on-the-go teams

A structured video work flow platform

A centralized system that manages complete video production from concept to delivery.

Workflow Pipeline: Research→ Script → Shoot → Edit → Review →Publish

Handles multiple projects in one unified space

Structured client feedback system

Organized file and workflow management

"We turn scattered processes into a clear system"

Tech Stack

Built for performance, scalability, and media-heavy workflows

Frontend
React / Next.js for fast, responsive interface

Backend
Node.js / Express for robust API handling

Database
MongoDB / PostgreSQL for flexible data management

Storage
AWS S3 / Cloudinary for scalable media handling

Processing

Implementation Details

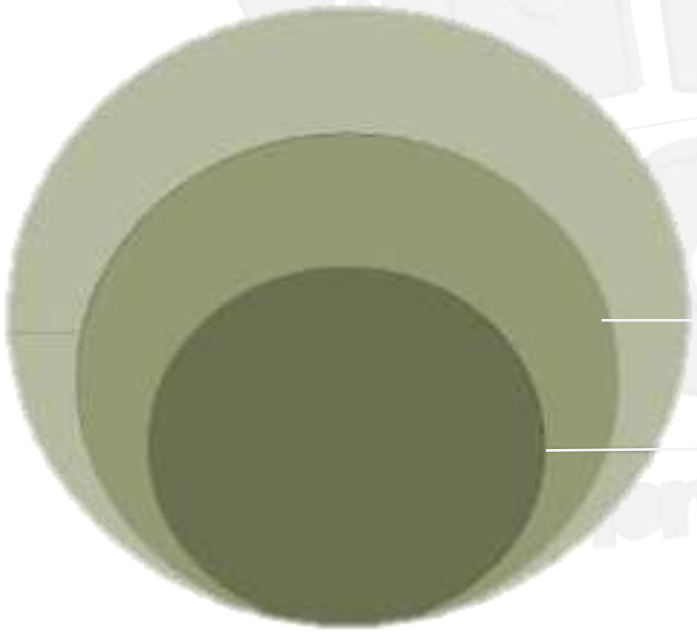
System Design

- Role based access control for security
- Multi-project kanban workflow engine
- File vault with metadata organization
- Timestamp-based feedback system

Development Approach

- Modular architecture for maintainability
- Scalable storage handling for media files
- Real-time collaboration support

SYSTEM ARCHITECTURE



Data media layer

Database , object storage and video processing

Backend Layer

API gateway , real time services, and orchestration

Frontend layer

User interfaces for real time collaboration

Workflow Pipeline

Research
Gather ideas and assets

Shoot
Capture video footage

Review
Gather feedback

1 → 2 → 3 → 4 → 5 → 6

Script
Develop narrative structure

Edit
Assemble and refine

Publish
Deliver final product

Graphic Era Hill University
HALDWANI CAMPUS

TECH GEEKS

Key Features

Multi-Project Workflow

Manage unlimited projects simultaneously with organized kanban boards and clear progress tracking

Time stamped Feedback

Pin comments to specific video moments, eliminating confusion and accelerating approval cycles

File Vault System

Centralized storage with metadata organization , version control , and smart search capabilities

Cost-effective Solution

Professional-grade tools without enterprise pricing , with scalable plans for growing teams
